# Knuckle Input

Robin Schweigert, Simon Hagenmayer, Jan Leusmann

---

Fachpraktikum Interaktive Systeme: Machine Learning and Computer Vision for  
HCI | Stuttgart | 11.12.2018

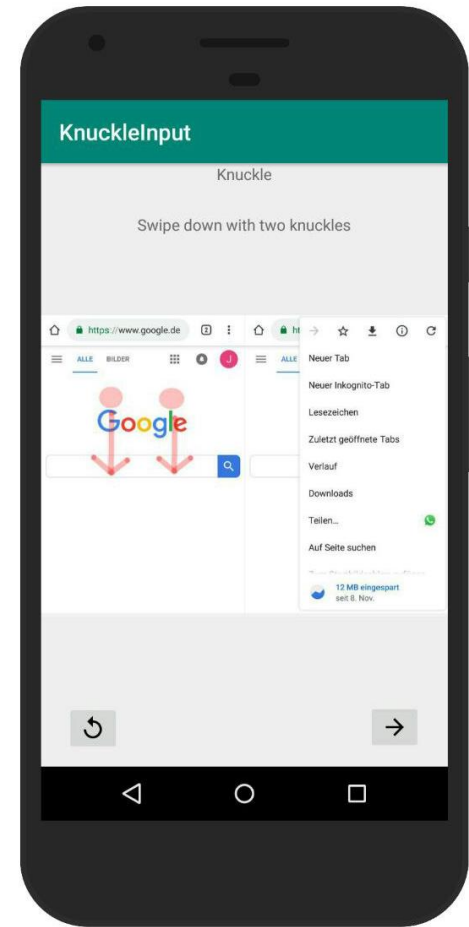

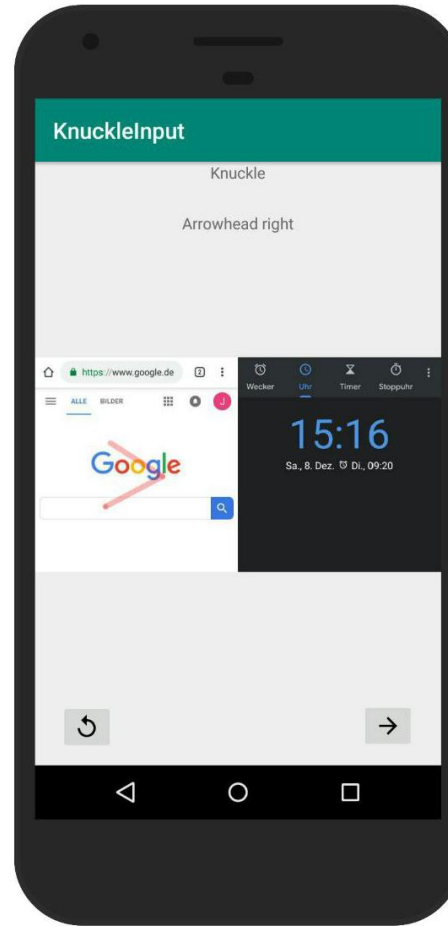

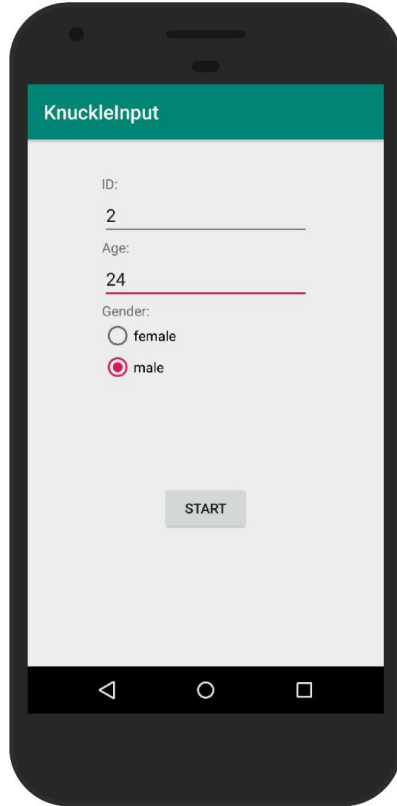

# Current Status

- Created example images for each gesture
- Study procedure implemented in app
  - Odd UserIDs start with finger, even UserIDs with knuckle
  - Gestures in random order
- Datawriter ist implemented

# Gestures

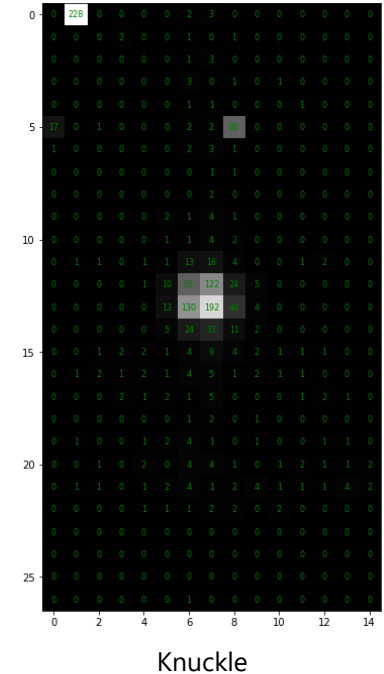

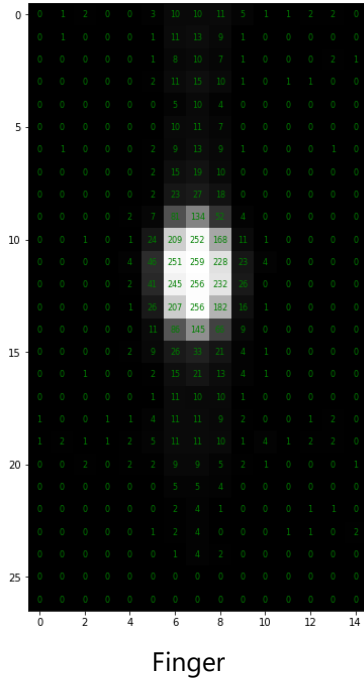

- Press
- Two knuckle press
- Swipe left/right/up/down
- Two knuckle swipe up/down
- Arrowhead left/right
- Checkmark
- L, mirrored L and  $\Gamma$
- S
- Press and rotate
- Right-click
- Open multitasking view
- Rotate 3D object
- Open settings / app settings
- Switch between apps
- Confirm input
- Custom apps, flashlight
- Screenshot
- Change volume

# App structure

# Data Collection

- Data is stored
- 24.7 to 24.8 samples/second
- Some data is lost
  - < 1%
  - DataStream is missing some characters
- Blob Detection in progress

# Todo

- New blob detection, because the kernel with highest output slows down input
- Pilot study
